DETAILED ACTION

1. The examiner of record for the present application has changed. However, the Technology Center (TC1600) and Art Unit (AU 1639) remain the same.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5 and 7-10, drawn to a method of identifying a polynucleotide of a microbe.

Group II, claim(s) 6, drawn to a method of confirming the identity of a polynucleotide.

Group III, claim(s) 11-12, drawn to a method of comparing polynucleotides of a microbe that are expressed in vivo at different stages of infection.

Group IV, claim(s) 13-14, drawn to a method of comparing polynucleotides of a microbe that are expressed in vivo wherein the route of infection is different.

Group V, claim(s) 15-17, drawn to a method of confirming an animal model of microbial infection as a valid model.

3. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature is the method step of adsorbing antibodies against in vivo expressed microbe antigens with in vitro microbe extracts. However, this method step is known in the art. Specifically, Ebersole et al. (J. Clin. Immunol. 3(4): 321-331, 1983; provided by applicants in the IDS) teach methods comprising collecting serum comprising antibodies from patients infected with *A. actinomycetemcomitans*, growing *A. actinomycetemcomitans* in culture (please note: since the bacteria is actually a single cell organism, cell culture propagation would be considered in vivo; however, in vitro could also be interpreted as "outside" a host), performing ELISAs, and performing adsorption studies (please refer to the entire reference particularly Methods section).

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
